This document represents the summary of actions and monitoring that has taken place since the issuance of the initial Rangeland Program Summary in 1981. All of the grazing decisions issued in 1988 have been implemented. In the past the grazing program emphasis was monitoring to support issued decisions but is now shifting to the collecting of resource data to support the development of management plans for allotments. The monitoring that has been completed to date has identified specific problems in the livestock grazing program and emphasized the need for grazing management to resolve those problems. Adjustments in numbers of livestock and use dates alone are not correcting the problems resulting from the unmanaged grazing of livestock.

The management plans that will be written in the future will be specific to grazing allotments but will address all of the resource problems in that allotment whether caused by livestock or not. This will be a true multi-disciplinary effort that will involve participation by all BLM resource specialist and affected groups outside of BLM in the preparation of the management plan. Decisions to implement plans will be supported with funding from all disciplines within this BLM office. A difficult obstacle to overcome in plan development will be the limitations in manpower and funding to support this effort. To help in overcoming this, management plan development will become a high priority for all involved resources within this resource area.

I would like to thank all those who were involved in the preparation of this document. For those who are reading this document for the first time please do not let the size discourage you from going any further. The bulk of this RPS update is tables. We made every effort to make the text brief, to the point but at the same time informative. If you have any questions or suggestions please feel free to contact anyone on the range staff or myself at this office.

Sincerely yours,

Barry A. Tollefson
Area Manager

GUNNISON BASIN AND AMERICAN FLATS

RANGELAND PROGRAM SUMMARY UPDATE

1987

I. INTRODUCTION

This is the 4th Rangeland Program Summary (RPS) Update of the initial RPS issued in June of 1981. The 1981 RPS was issued as the decision document at the completion of the Gunnison Basin Livestock Grazing Environmental Impact Statement in September, 1980. The purpose of this RPS update is to inform interested parties of what progress has taken place in the livestock grazing program towards meeting land use plan objectives for this area.

Discussion of the grazing program will include administrative and management actions within the grazing program, grazing and wildlife use monitoring, and future management direction. There will also be a discussion of the upcoming Resource Management Plan scheduled to start in 1988 for the Gunnison Resource Area.

II. ADMINISTRATIVE AND MANAGEMENT ACTIONS OF THE GRAZING PROGRAM

In January of 1985 the Gunnison Resource Area office was moved from Montrose, Colorado to Gunnison, Colorado. With that move the entire range staff was replaced with new personnel, and because of this and budget reductions, it was necessary to redirect work priorities. The staff continued with the implementation of Allotment Management Plans (AMP) previously initiated but the development of new plans was delayed. The staffs' efforts were concentrated on the monitoring aspect of the grazing program, familiarization with the existing AMP's, and of problem areas within the Resource Area.

A. Current Situation

In the Spring of 1982, decisions were issued to all grazing permittees in the Resource Area to establish class of stock, seasons of use, and stocking rates on BLM grazing allotments. In some cases adjustments were made in either stocking rates or season of use. The adjustments made in stocking rates were spread over a 5 year implementation period. The full implementation of these decisions was completed in 1986. The current management situation and the management situation as it existed in 1981 are shown in the Appendix, where comparisons of the two can be made. Of the allotments scheduled for adjustments, one decision was modified. In that case, monitoring studies did not support the total reduction established in the 1982 decision.

Adjustments on the remaining allotments were made as established in the 1982 decisions. There were 39 allotments and 259,667 acres that had changes in season of use (in most cases later turnouts) and 66 allotments and 195,435 acres had reductions in authorized use. The licensed AUMs in 1981 as compared to 1987 is shown below:

	<u>Licensed Use</u>		
	Active AUMs	Suspended Non-Use	Total Preference
1981	54,727	8,115	62,842
1987	47,428	14,944	62,372

There are now 22 allotments that are not allocated for livestock use for a total of 25,872 acres. These acres have been excluded from livestock grazing because of land use decisions. There are also 8 allotments that are vacant and not being used by livestock at this time. These 8 allotments cover 14,731 acres. The vacant allotments are available for livestock use but no qualified persons have applied for use of them.

B. Allotment Management Plan Development Program

Since the original RPS was issued in 1981 the following AMP's have been written, signed, and implemented.

<u>Allotment</u>	<u>Date Signed</u>
Beaver Creek 6203	July 1, 1982
Cabin Creek* 6301	October 3, 1983
Alder Creek* 6302	October 3, 1983
Lower Cochetopa 6312	June 11, 1985

*These AMP's were modified after they had been signed. The modification delayed implementation of a pasture rotation system to determine if increased effort at handling of the cattle would achieve management objectives. This modification is being evaluated this year (FY88).

In the summer of 1986 the state office requested that each District within Colorado propose a demonstration allotment to illustrate and evaluate the effects of good riparian management. The Lower Cochetopa Allotment of the Gunnison R.A. was chosen as the demonstration allotment for the Montrose District. The existing four pasture rest-rotation grazing system was modified to a three pasture deferred with a separate riparian pasture. The new grazing system was implemented in 1987 and monitoring studies initiated in the 1987 field season. The effects of this new management scheme will be evaluated in FY92.

In 1985, new starts on the development of AMP's were delayed due to a need to increase emphasis on monitoring of the grazing program and a

significantly reduced budget to implement AMP's. In 1986 a new area policy was written that addresses the procedures for the development of AMP's that takes into consideration the limited funding available for AMP implementation. Using the new policy as a guideline new AMP's will be written during the winter of 1988-89 on the Doyleville Common 6304 and Tomichi Dome 6309 Allotments. Initial permittee contacts will be conducted during 1988.

The 1984 RPS update indicates allotments scheduled for AMP development and their priority ranking (Table I). This table also shows the tentative date the highest priority allotments will have AMPs written. Anticipated staffing, resource concerns, and range improvement funding were considered when establishing dates for AMP development.

Another factor of the AMP program is the evaluation of implemented AMP's to determine if planned actions are meeting established management objectives set in the AMP and the land use plans. A schedule for the first cycle of formal evaluations for all of the AMP's in the Resource Area is shown in Table II. These evaluations will be completed using available monitoring data. The evaluation will make assessments as to whether the plan is meeting management objectives and if revisions in the plan are necessary.

An important factor in the development and evaluation of AMPs is rangeland monitoring. Monitoring several years prior to these actions is needed to support recommendations and decisions. Yearly monitoring schedules established will consider AMP development and evaluation priorities which may result in annual adjustments of time commitments for rangeland monitoring.

C. Range Improvement Program

Since 1984 the range improvement program for the area has focused primarily on previously implemented AMP's. Except for the Lower Cochetopa AMP all other AMP's have been implemented. Some of the vegetative treatments proposed for the Lower Cochetopa Allotment 6312 have been delayed because of restrictions on herbicide use by BLM.

TABLE I

RANKING OF ALLOTMENTS IDENTIFIED FOR AMP DEVELOPMENT/REVISION
IN THE GUNNISON RESOURCE AREA

<u>RANKING</u>	<u>ALLOTMENT NUMBER</u>	<u>ALLOTMENT NAME</u>	<u>DATES FOR DEVELOPMENT</u>	<u>RANKING</u>	<u>ALLOTMENT NUMBER</u>	<u>ALLOTMENT NAME</u>
1.	6107	Iola Powderhorn	Summer 88	36.	6210	Deep Gulch

92	Trail Creek #6344 Lower Cochetopa #6312
93	Muddy Poison #6338 Grizzly Gulch #6505 Sheeps Gulch #6300

* The evaluation will be completed in the period of October to March of the fiscal year shown.

Presently most range improvement work being done consists of reconstruction of existing projects and/or construction of new projects identified as necessary to improve the effectiveness of existing management. The range improvement projects and monies expended from 1984 through 1987 are shown in Table III. Following is a listing of expenditures by year from 1982 through 1987.

<u>Year</u>	<u>BLM Costs</u>	<u>Private Contribution</u>	<u>Advisory Board Contribution</u>	<u>Total Expenditures</u>
1982	42,781.00	869.00	5,123.22	48,773.22
1983	107,048.00	8,500.00	2,500.00	118,048.00
1984	15,000.00	6,392.02	8,395.54	29,792.56
1985	25,195.00	4,031.26	1,696.75	30,923.01
1986	14,900.00	10,866.30	5,963.60	31,729.90
1987	<u>9,487.80</u>	<u>8,612.14</u>	<u>12,673.17</u>	<u>30,773.11</u>
TOTALS	\$214,411.80	\$39,275.72	\$36,852.28	\$290,539.80

D. New Policy

Written guidance regarding three aspects of the Resource Area grazing program have been developed. Subjects addressed in guidance documents include range readiness criteria, allocation of additional forage for livestock and intensive monitoring for AMP development. Interdisciplinary discussion of each subject provided the necessary information to develop Resource Area policy acceptable to management. These policies will assist in the administration and management of the grazing program. The first and most difficult issue addressed was that of developing criteria for determining range readiness on BLM lands which allows turnout of livestock for grazing. Several allotments within the Resource Area turn livestock out on BLM lands based solely on range readiness thus it is important that sound and consistent criteria is used when determining if the range is ready for grazing. Previously range readiness standards were not consistent throughout the Resource Area. The higher elevation ranges in the Lake City area have formally accepted criteria. The lower elevation ranges, close to Gunnison, had unofficial standards that were significantly less restrictive than those standards of the high country.

When analyzed, the existing standards for the lower country around Gunnison allowed grazing to begin while plants were still in their early growth stages. Studies show that grazing in the early growth stages before plants reach the 5-6 leaf stage of growth can be detrimental to the plants. So in effect the range readiness standard for the lower country did not represent when the plants are ready for grazing. A search of the information available on range readiness showed that the standards the BLM is using for the Lake City Area are the best standards available. These standards meet plant requirements and better represent when the range is ready for grazing. It was decided to apply the standards used in the Lake City Area, and documented in the American Flats/Silverton Management Framework Plan, to the entire Resource Area. These standards, as adopted, will be used to set turnout dates for those allotments south of Lake City (Allotment number 6500 to 6510). This will not mean a change of procedure from what has been done in the past. In the remainder of

TABLE III

Project Year 1984							
Allot. No.	Project Name and Number	Project Type	Units	BLM Cost	Advisory Board Contribution	Private Contribution	Totals

		Totals		\$9,487.80	\$12,673.17	\$8,612.14	\$30,773.11

the Resource Area those standards will be used to determine readiness when applications are received requesting turnout dates earlier than that set in a permittees term permit. These standards will also be used when AMP's are being developed to assure that plant requirements are being met by the described management plan. These standards are the same as those used by the Forest Service in the Gunnison Area. This will assure that all permittees (Forest Service and BLM) are working with the same standards which is also helpful in more effectively synchronizing movements of livestock off of BLM and onto Forest Service Permits.

The policy for the authorization of additional livestock use, whether it be temporary nonrenewable, or permanent, establishes criteria that must be met before any additional use can be authorized. This criteria includes monitoring studies, review of land use plans and management objectives, and follow up monitoring to assess the additional use. Administrative decisions will be used to implement any changes.

The AMP development policy establishes procedures for the writing of AMP's. It sets up steps that will be followed in preparing for the actual writing of the AMP. It outlines interdisciplinary activity involving all resources in the development of the plan. This policy also discusses the current problems of limited range improvement funding which affects management action proposals.

These policies, which were adopted in March 87 by the Area Manager, are available at the Gunnison Resource Area office for any interested party's review.

A new policy for the management of riparian areas was signed by the Director of the BLM on January 22, 1987. This policy defined what riparian areas are, the Bureau's objectives in the management of these areas and what steps the Bureau will take to implement this policy. A copy of this policy and information on riparian areas are also available at the Gunnison Resource Area office.

III. RANGELAND MONITORING PROGRAM

In March 1987, the Area's Rangeland Monitoring Plan was signed. This plan provides a consistent, multiple-resource approach for gathering and using field data applicable to monitoring resource objectives and goals. The Plan includes minimum field procedures for recording actual use, measuring key forage plant utilization, use pattern mapping, collecting frequency, cover and composition trend data, aquatic habitat trend data, water quality trend data and precipitation data. In addition to describing procedures, the Plan also includes a monitoring schedule for utilization and trend. The schedule was based on the Bureau's classification criteria for I (Improvement), M (Maintenance) and C(Custodial) allotments.

A. Grazing Program Monitoring

With the issuance of decisions to all grazing permittees in 1982 a commitment was made to initiate monitoring efforts in the grazing program.

The monitoring methods being used for the grazing program are described as follows:

Actual Use -

Actual use is no more than a record of season of use, numbers and kind of livestock. Submission of actual use is the responsibility of the permittee and is required as a term and condition of all permits.

Utilization -

Prior to 1985, the modified Key Forage Plant Method was used. An evaluation of data collected using this method showed that modification to the sampling design would significantly improve the quality of data collected. This modification presently known as the Key Forage Plant Method, combined with utilization mapping, has been the method employed from 1985 to present. Schedules to monitor livestock use by allotment have been developed. Long term schedules were developed based on management status (i.e. AMP/I, I, M, and C). Yearly schedules take into account staff capabilities based on funding and priorities.

Trend -

Trend refers to direction of change and is important in determining the effectiveness of progress toward stated or implied management objectives. Various methods are used to monitor changes occurring in vegetative communities throughout the Resource Area. As with utilization, monitoring schedules have been established to accommodate management priorities. Present procedures include photo documentation, apparent trend (an estimate of trend based on indicators of current change occurring in vegetation, vigor, seedlings, surface litter and soil movement) and documentation of vegetative cover and frequency.

The Appendix illustrates the monitoring that has been completed from 1981 through 1987. Of the studies data collected to date, the most reflective of the current management problems are the utilization studies. These studies show a serious distribution problem with most livestock use taking place in drainages, riparian areas, and treatment areas (seedlings, burns, spraying). This problem is observed on a majority of the allotments monitored. The utilization studies are showing that reductions in livestock numbers with no other management changes does little to relieve grazing pressures on the problem areas. It is evident from the studies that changes have to be made in the traditional ways of handling and management of livestock if significant improvements in riparian and treatments areas are to be realized.

Actual use reported is below what is available for use which reflects the poor economic condition of livestock industry in this area. Trend studies in this area have only been in place since 1981-82 so many have not been reread. It is not possible at this time to make determinations in trend from these studies.

B. Wildlife Program Monitoring

Over the past years, there has been an increasing concern as to the numbers of elk and deer using public land winter ranges in the Gunnison Resource Area. The concerns are with the relationships between the use of forage by elk, deer, and cattle and the impacts this could have on critical winter range and cattle spring ranges. The major area of concern are those BLM lands north of Highway 50, east and west of Gunnison. This is within the Colorado Division of Wildlife game management units (GMU) 54,55 and portions of 551 (see Map 1).

The specific concern expressed was that elk and deer spend the winter in the sagebrush grassland habitats used by cattle during the spring. The grazing permittees feel the elk and deer are making heavy use on grasses during spring green up before they move up to higher elevation ranges and before cattle come onto the lower ranges. It is felt that the heavy use during the spring by elk and deer is damaging forage thus contributing to the poor and/or declining range conditions in those areas. Previous to this time, no comprehensive studies had been conducted to determine when elk and deer were on the lower critical winter ranges on BLM lands and what amounts of forage plants they were utilizing. Due to the lack of studies data, it has not been possible to state conclusively whether or not big game use was adversely impacting the condition of the rangelands.

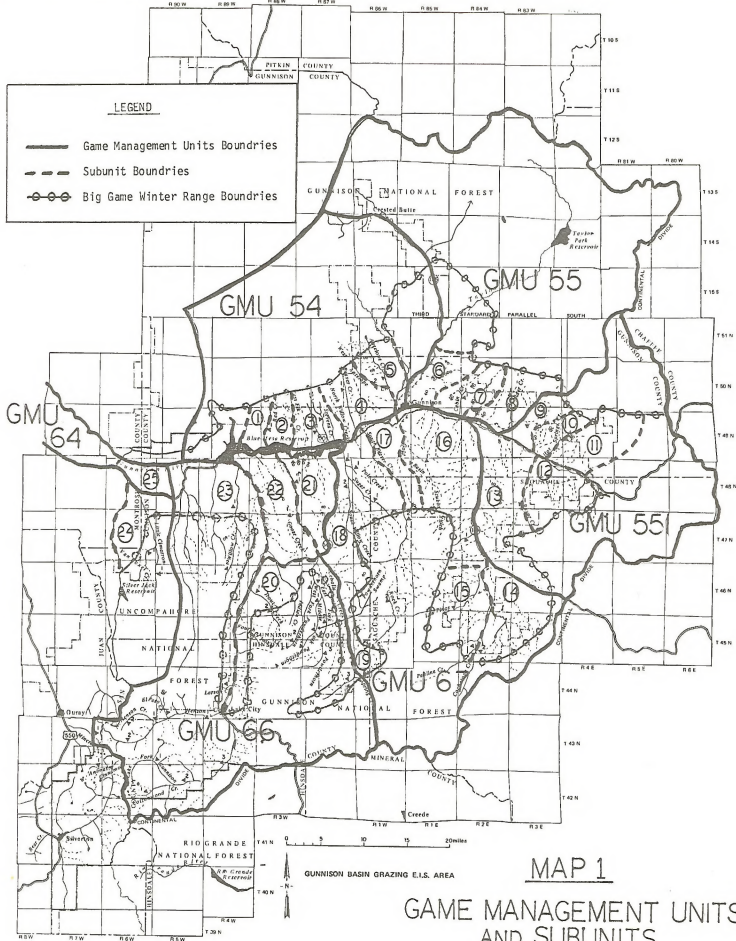

In the spring of 1983, the BLM implemented a monitoring program to collect data to answer the questions of big game use on critical wintering areas. Monitoring initiated was as follows:

Actual Use Figures:

Working with the Colorado Division of Wildlife the big game critical winter areas mentioned above were divided into 26 subunits (see Map I). These were then used as survey units for post hunting season population surveys. The aerial counts and sex ratio information was then collected by subunit. Using this data estimates were made on the number of animals wintering within each subunit. The numbers of animals represent that portion of the herd wintering within a subunit on BLM, private and Park Service lands, below the Forest Service boundary. From this data, numbers of animals by subunit calculations are made to determine AUMs used by big game species in each subunit.

Distribution/Season of Use:

Another aspect of the monitoring was to determine elk and deer distribution patterns and season of use on winter ranges. Beginning in 1983 and continuing through 1986, aerial surveys were conducted periodically from December 15 to approximately the end of April. The number of flights conducted during the winter were based on snow conditions. Snowfall influenced how the animals distributed themselves on the winter range, so flights were scheduled after major changes in snow conditions. The flights were always started in mid-December and completed in the latter part of April. Because of the difficulty in seeing deer from a fixed wing aircraft only elk sightings were recorded.

Utilization/Trend:

Utilization of browse and herbaceous forage by big game is conducted annually during the spring, before livestock turnout. Procedures for recording big game utilization are similar to those used for recording livestock use (the Key Forage Plant Method with utilization mapping). Information pertaining to trend is collected through the same studies that the grazing program is reading.

Results of the Monitoring Show:

-Herd sizes of both deer and elk are not significantly changing and are still below those herd size goals set by the Colorado DOW. Herd sizes by G.M.U. is shown in Table IV.

-Distribution of use by elk and deer varies significantly with snow depths. During years of light to average snowfall the animals are widely dispersed using higher elevation ranges on both BLM and Forest Service. In years of high snow accumulation the herds are concentrated on the lower elevation ranges with no use taking place on Forest Service lands, thus resulting in a defacto rest-rotation pattern. Actual use made by wintering deer and elk by G.M.U. is shown in Table V.

-The time that the herds spend on the winter range is dependant on snow. Animals start appearing on the winter ranges usually in mid-December with snow depths apparently being the influencing factor to bring them down. They will stay on the winter ranges until the snows begin to melt off. As soon as the higher elevation ranges open up the animals move up. In most cases the ranges have not started to green up so this does not appear to be a factor in their wanting to move to higher ranges in the spring. By the end of April, except for those resident animals, all of the herds have moved off of the winter ranges and are up on Forest Service lands. In most years most of the herds are off the winter areas before green up starts.

-Utilization studies show that use of the grasses greening up in the spring on BLM winter ranges are in the 0-10% category. This is due to most animals being off of these ranges when they start greening up. Most of the use observed by the wintering big game animals are on shrubs and residual growth of grasses left over from the previous growing season. Use in the study area as a whole is within limits established by the BLM. The exception to this is in the winter range west of Cimarron north of Highway 50. In this area there is severe overuse problems on the browse that is in some instances killing the mountain mahogany.

The conclusions that can be drawn from this study is that, except in the Cimarron area, wintering big game use in the study area is within limits set in the present BLM land use plan. Big game use at the present population levels is not now adversely effecting range conditions.

Table IV

Estimated Total Number of Big Game Species Within Each Game Management Unit.

ELK						DEER				
GMU	Herd Size Goals					Herd Size Goals				
		1984	1985	1986	1987		1984	1985	1986	1987
54	3,000	2,556	2,477	2,509	2,446	4,800	3,986	3,566	3,597	4,085
55/551	3,000	2,953	2,684	2,592	2,350	5,000	4,129	3,479	3,437	3,475
66/67	3,000	2,601	2,486	2,189	2,108	6,800	2,859	2,483	2,560	2,555

These estimates represent population levels in the early spring of the year indicated. These population numbers are provided to the BLM by the Colorado Division of Wildlife.

TABLE V

Big Game Actual Use Data

Estimated Numbers of Big Game Species on Winter Ranges**

GMU	ELK				DEER			
	83/84*	84/85	85/86	86/87	83/84*	84/85	85/86	86/87
54	2,460	1,180	1,235	1,150	1,660	630	705	500
55	545	370	450	220	1,600	880	840	640

Estimated Forage Used*** by Big Species on Winter Range**

GMU	ELK				DEER			
	83/84*	84/85	85/86	86/87	83/84*	84/85	85/86	86/87
54	1,968	3,776	3,952	3,680	622	630	705	500
55	436	1,184	1,440	704	600	880	840	640

*High snow depths were experienced during the winter of 1983/84.

**The winter ranges include BLM, private, state and Forest Service lands. The data presented in these tables are not divided by land ownership. In the case of GMU-54, less than 50% of the lands are BLM lands.

***Forage used is shown in Animal Unit Months (AUMs). These numbers are provided to the BLM by the Colorado Division of Wildlife.

The monitoring of big game winter use on an intensive level has been moved from the above mentioned study area to a new area, those BLM lands south of Highway 50. Because of limited funding it is not possible to intensively monitor the entire Resource Area so only spot checks will be made in the study area north of Highway 50. Anyone wishing to review the studies evaluation which was summarized here should contact the Gunnison BLM office.

C. Conclusion

In addition to the studies previously discussed there has been an extensive effort to provide comparison areas in riparian areas throughout the resource area. This has been accomplished by building small enclosures and excluding them from use by livestock. Some of the areas have quantitative studies set up in them while others only have qualitative studies. It is hoped that these enclosures will provide information as to the vegetative potential from riparian areas in the resource area. This information can then be used to measure the conditions of riparian areas and develop future management goals.

Now that all of the rangeland decisions that were issued in 1982 have been implemented the focus of the areas monitoring program will change. The emphasis for monitoring will be to support future management actions such as developing AMP's, evaluation of AMP's, and inventories. Also known problem areas will continue to be watched closely. Because of funding and personnel limits it will be difficult to conduct all studies that are called for on a yearly basis but some level of monitoring will continue.

If any persons are interested or have any questions about the Resource Area's monitoring program they are encouraged to review the Rangeland Monitoring Plan for the Gunnison Resource Area. Copies are available for review at the Gunnison Resource Area office. Also, all of the files containing studies data are available for inspection at the BLM office and interested parties are encouraged to accompany and assist in conducting our field studies.

IV FUTURE MANAGEMENT DIRECTION

With the full implementation of all of the rangeland decisions issued in the spring of 1982 the direction of the grazing program will shift to emphasizing the implementation of management actions to correct livestock grazing problems.

Using the new AMP development policy for this area there will be heavy reliance on the monitoring program and permittee input to completely analyze and identify problems on a grazing allotment in preparation for the writing of an AMP. The data collected will be used to justify and support management decisions that will be made to correct resource problems. The major obstacle to the development of AMP's is the limited staffing and range improvement funding. Our capabilities to properly analyze an allotment and then develop an AMP that will adequately resolve resource problems is limited to only two

allotments a year. The AMP's that will be written will not be able to rely heavily on range betterment funds to assist in the solving of resource problems. New AMP's will have to rely on inovative thinking and an even greater participation by the grazing permittee to solve resource problems. In some cases, because of the limited funding, significant changes may have to be made on how permittees use public lands in their livestock operation if they wish to continue to use them.

This year a Resource Management Plan (RMP) is being started for this area. The RMP is a document that is developed through the land use planning process that will provide direction to the BLM staff on how all resources on the public lands in the Gunnison Resource Area will be managed. The development of the RMP relies heavily on public participation to identify issues in public land management in this area and public input on how the BLM should best handle those issues, combined with identification and proposed solutions to management concerns identified by BLM.

Issues in the grazing program that BLM is sure it will have to address are management of riparian areas and timely implementation of management to correct grazing problems considering restricted funding. Other issues may be added and these mentioned may be modified. The BLM encourages anyone interested in the future management direction for the public lands in the Gunnison area to become involved in this land use planning process.

Appendix

This appendix is divided into two sections. First are the summary tables, which are tables showing tabulations of information from the allotment data tables, which are commonly used to illustrate the existing situation within the grazing program in this resource area. The second part of the Appendix are the allotment data tables. Those tables illustrate what the existing situation is on every designated allotment with the Gunnison Resource Area.

Summary Tables of Appendix Data

Livestock Utilization Monitoring Numbers of Allotments and Acreages by Year

Year	Management Category						Yearly Totals	
	M		I		C			
	# of Allot.	Acres	# of Allot.	Acres	# of Allot.	Acres	# of Allot.	Acres
1981	26	58,402	60	439,652	31	8,230	117	506,284
1982	19	48,524	59	420,358	22	6,377	100	475,259
1983	16	43,238	50	388,951	10	2,767	76	439,628
1984	10	33,609	51	391,754	4	2,898	65	428,261
1985	12	36,291	40	360,901	6	2,305	58	399,497
1986	6	21,435	37	367,390	3	944	46	389,769
1987	11	39,054	46	401,992	1	713	58	441,759

Utilization studies conducted between 1981 through 1984 were done using the modified Key Forage Plant Method. Starting in 1985, the Key Forage Plant Method combined with utilization mapping was the method used for utilization studies. All of the acres represented in 1985 through 1987 have had utilization mapping completed on them.

On a majority of these allotments condition surveys were not conducted because they were not being grazed by livestock. In those cases all of the allotments acres are shown as unclassified.

Allotment Data Tables

The following tables have been set up to show what the existing situation is on every designated allotment within the Gunnison Resource Area. Following is a description of the tables:

Allotment Number and Name - Tables are arranged in numerical order by allotment number followed by the allotment name.

Grazing Use Status - Status is shown as follows: Allotted-Allotment is allotted for use and is being grazed, Allotted/Vacant-Allotment is available for use but no qualified applicants have applied to use the allotments, Unallotted-allotments are not available for grazing.

Management Category - All allotments being grazed have been placed into one of 3 management categories. The category indicates the level of management emphasis for that particular allotment. The categories are: M-Maintain Category -allotment is in satisfactory condition and has acceptable management. BLM will only do periodic inspections to assure continuing good conditions. I-Intensive Management - range conditions and management are unacceptable and BLM will concentrate its management efforts on these allotments. C-Custodial - these allotments have little management potential and only infrequent inspections will be conducted.

AMP Status - Indicates whether an allotment has a signed and implemented Allotment Management Plan (AMP). Non-AMP-indicates it does not have an AMP. AMP-indicates it has an AMP.

Administrative Responsibility - Shows if the BLM allotment is being administered by the BLM or if administrative responsibilities have been transferred to the Forest Service. A cooperative agreement was signed in 1970 and updated in 1984 between the BLM and USFS that transferred administrative responsibility of both BLM and USFS allotments.

Base Property Requirement - This indicates the minimum amount of time that the base property must be capable of carrying the number of livestock authorized to graze on public lands. Example: 4:8 - The first number (4) indicates the number of months that the authorized livestock must be able to graze on private lands (base property). The second number (8) indicates the maximum number of months that the authorized livestock can be on public lands. Base property requirements are still required in the grazing regulations (43 CFR 4110.2-1) and vary by allotment.

Permittees - Number of permittees authorized to graze livestock on an allotment.

Allotment Acres - This table shows the total number of acres by ownership that grazing use is authorized on within the boundaries of a given allotment. In some cases there may be acreages that are not controlled by the BLM or permittee (example: unfenced private lands owned by someone other than the permittee) that are not shown in these tabulations. The BLM acreages are broken down into range condition classes which were taken from the most current Unit Resource Analysis (U.R.A.) for the Gunnison Resource Area dated 12/78. Acreages shown as unclassified are lands that were identified as unsuitable for grazing.

Remarks - Explanation of the current situation on the allotment.

Authorized Use - This table shows what livestock use was authorized in 1981, before any decisions were issued, and what the authorized use is in 1987.

Actual Use - This shows what the actual use was on the allotment through the period 1982-87 by year. In some cases the symbol N/U is used. This represents authorized non-use on an allotment, and no grazing took place on the allotment. In other cases parenthesis () are around an actual use number. This indicates that the number represents licensed use and not actual use.

Monitoring Conducted - This table illustrates grazing monitoring studies conducted on the allotment from 1981 through 1987 by year. If an allotment is divided into pastures the studies conducted are shown by pasture. The write-ups for these studies are contained in the allotment files in the Gunnison Resource Area office. The utilization studies conducted for 1985-1987 include utilization mapping.

Remarks - Any needed explanations of the monitoring studies.

Good	Fair	Poor	Unclassified	Total				
0	0	0	13,370	13,370	0	0	0	13,370

Remarks: In 1986 the Grizzly Gulch Allotment #6505 was adjusted. The American Basin Allotment #8903 (2290 acres) and 2412 acres of the Price Brothers Allotment #8908 was added to the Grizzly Gulch Allotment. These two allotments had been administered by the San Juan Resource Area. San Juan Resource Area was given 1924 acres from the Grizzly Gulch to be administered separately. Present authorized AUMs is based on an agreement signed 4/21/87.
